1. Write a program that prints out a message of your choosing exactly 5 times. Use a for-loop.
b) Modify your program to accept an input, the number of times to print your message.

2. Write a program that has starts with a number and subtracts 20 from it 3 times. Your program receives the starting number as input. Print out the result.

3. Write a program that accepts as input, 4 numbers, then displays the result of multiplying the 4 numbers together.
Note: Decide what statements can be repeated, and what are the initial conditions, and any end calculations. Do not use 4 separate variables to hold the 4 values.
